1. Description

1.1 General Description

The White LED, which was fabricated by using a blue chip and the phosphor.

Product Package: 3.0mmX1.4mmX0.7mm.

LED, : 3.0mmX1.4mmX0.7mm

1.2 Features

PLCC Package. PLCC

Wide viewing angle.

Suitable for all SMT assembly and solder process. SMT

Available on tape and reel.

Moisture sensitivity level: Level 3. Level 3

RoHS compliant. RoHS

1.3 Application

LCD Back Light. LCD

1.4 Package Dimension 7ûp .

5 H F R P Q G H R G L V G L Q J S

Notes =# Æ

All dimensions units are millimeters v ? p . =# < f p"!2©

All dimensions tolerances are r0.1mm unless otherwise noted.Lš(a =# L , v ? p . ç \$

1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

Item	Symbol	Test Condition	Value			Unit
			Min.	Typ.	Max.	
Forward Voltage	V_F	$I_F=30\text{mA}$	---	3.1	---	V
Reverse Current	I_R	$V_R=5\text{V}$	---	---	1	μA
Luminous Intensity	I_v	$I_F=30\text{mA}$	---	4000	---	mcd
Viewing Angle	2 1/2	$I_F=30\text{mA}$	---	120	---	deg

Table 1-2 Absolute Maximum Ratings at Ts=25°C

Parameter	Symbol	Rating	Units
Forward Current	I_F	35	mA
Peak Forward Current	I_{FP}	100	mA
Reverse Voltage	V_R	5	V
Electrostatic Discharge (HBM)	E_{SD}	2000	V
LED Junction Temperature (LED)	T_j	105	
Operating Temperature	T_{OPR}	-30 ~ + 85	
Storage Temperature	T_{STG}	-40~+100	

Notes

1. 1/10 Duty cycle, 0.1ms pulse width. 0.1ms,

(T_P) 5 °C actual peak temperature (TP)	Hold time within 5 °C with the	30	Max 30s
Cooling speed		6 °C/	Max 6 °C
25 °C	Needed time from 25 °C to T_p	8	Max 8 minu

Notes

(1)Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings , LED will be darr

24 LED

(2)Whensoldering , do not put stress on the LEDs during heating.

3.1.1 Soldering Iron

(1) When do soldering by hand, keep the temperature of iron below less 300 less than 3 seconds.

300 3

(2) Soldering by hand should be done only one time.

3.1.2 Repairing

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or not be damaged by repairing.

LED #w'@ D C ÉB \$ C . %o ûN± \$ C, , ûN± µ+^ j' J÷ ,6B J Á ~ Ê.µAÚ!š 0 ĩ E P C P • ...LED bDá°(] >

3.1.3 Cautions # E ÁN⁻

(1) The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be impacted on the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when use the picking up nozzle, the pressure on the silicone resin should be proper. LED 7>û7, p.{ 7, ,>žM⁻

(3) VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent

these issues. LT advises against the use of a
affect on device performance or reliability. To
specific application and environment for which
organic vapor.

(4) Handle the component along the side surface
lens surface, it may damage the internal circuit.

(5) In designing a circuit, the current through
meanwhile, resistors for protection should be
happen. The driving circuit must be designed
to LED, migration can be generated resulting

(6) Thermal Design is of paramount importance
brightness decreased, color change and so on
design. LED

(7) Compared to standard encasement,
special care during processing.
solution must be applied to the
case other solvents are used, it
not recommended. Ultrasonic cleaning

Table 4-1 Storage

Conditions		Temperature	Humidity	Time
Storage	Before Opening Aluminum Bag	30	75%	Within 1 Year From Date
	After Opening Aluminum Bag	30	60%	24hours 24
Baking		60±5	-	24hours
				24

(8) If the moisture absorbent material silica gel has faded away or the LEDs have exceeded the storage time baking treatment should be performed after unpacking and based on the following condition 65±5 for above 24 hours.

60±5 24

If the package is flatulence or damaged, please notify the sales staff to assist.

(9) Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS)

LED
